Alfresco Crawler Documentation

Introduction

In this document we will explain how to correctly setup the *Alfresco* crawler.

Prerequisites

In order to create the Alfresco crawler, we will require the following credentials:

- Password of alfresco account
- Username of alfresco account
- Domain
- Root path

Password & Username

Simply note the password and username (email address) you use to access the alfresco account of interest.

Domain

For the domain, please note the URL of the alfresco dashboard:

```
https://ech6kn93.trials.alfresco.com
```

We only want the *unique* code found in the URL (i.e., `ech6kn93`)

> ⚠️ If you are indeed using a trail version of alfresco, include the `.trials` with the domain parameter

Root Path

Specify the folder you wish to be crawled. For example:

If I wanted to crawl `book-summary`, simply provide the folder name 'book-summary' in the root path parameter.
